

```
1 package AccessModifiers;
2
3 //1. Class is having Default access modifier
4 class defAccessSpecifier
5 {
6     void display()
7     {
8         System.out.println("You are using default access specifier");
9     }
10 }
11 public class AccessSpecifiers {
12     public static void main(String[] args) {
13         //default
14         System.out.println("Default Access Specifier");
15         defAccessSpecifier obj = new defAccessSpecifier();
16         obj.display();
17     }
18 }
19
20 //2. using private access specifiers
21 class priAccessSpecifier
22 {
23     private void display()
24     {
25         System.out.println("You are using private access specifier");
26     }
27 }
28
29
30 public class accessSpecifiers2 {
31
32     public static void main(String[] args) {
33         //private
34         System.out.println("Private Access Specifier");
35         priAccessSpecifier obj = new priAccessSpecifier();
36         //trying to access private method of another class
37         //obj.display();
38     }
39 }
40
41
42
